

Comments from w7hn: There is no justification for power companies to be allowed to transmit spurious emissions. They, like the rest of us who transmit RF, should be required to meet the same RFI requirements as the FCC requires of Amateur Radio Operators.

Broadband over Power Lines (BPL) is such a radical RFI producer, the power companies must be restrained. It appears the FCC is opening pandora's box, where RFI is concerned.

It appears BPL cannot be regulated sufficiently and therefore should be prevented from operating, even as a test.
